Department of Town Planning and Housing, Nicosia

Control Edition_

CORTROL Premier (4x)

Camera Setup_

Site uses over 170 cameras spread across site

Physically connected using a Fiber network

On Cyprus, north of the City Centre of Nicosia, the Department of Town Planning and Housing (DTPH) has its home.

The DTPH is a government department under the Ministry of the Interior, and its main scope of operation concerns urban and spatial planning.

An important part of its mission is the implementation of the Town and Country Planning Law. The Department is made up of three main Sections, those of Housing, Planning and Development Control.

The shape, many twists and turns and numerous accesses again required good planning in advance by our local partner Wave Electronics. This project is one among many such similar projects executed by Wave Electronics.

For the connection of the over 170 cameras, a reliable and fast option was installed: Fiber. Due to the special architecture and requirements, a total of four CORTROL Premier stations were built.

Mr. Pamboss Charalambous of Wave Electronics commented „While the planning was complex due to the special features of the buildings, the installation and configuration of the servers was simple and time-saving thanks to CORTROL.“

„After the safety system has been in operation for some time, minor optimizations were carried out. Overall, we know that we have made the right decision with CORTROL in particular.“ said Mr. George Socratous, Sales Director of Wave Electronics.

CORTROL is a reliable companion not only for the installers, but also for the security personnel in daily use. All tasks can be completed easily, quickly and uncopied.
